CAREER OBJECTIVE

Final-semester Computer Science and Engineering student with hands-on, self-directed experience in network security, penetration testing, and vulnerability assessment using industry-standard tools. Seeking a Cybersecurity Internship to apply practical security skills, learn from experienced professionals, and contribute to real-world defensive and offensive security tasks.

EDUCATION

American International University-Bangladesh

Bachelor of Science (BSc) in Computer Science and Engineering | CGPA:3.60/4.00

Dhaka, Bangladesh

Expected August 2026

TECHNICAL SKILLS

- **Networking Fundamentals:** TCP/IP, DNS, HTTP/S, OSI Model, Subnetting, DHCP, ACLs, Firewalls, basic packet analysis.
- **Security Frameworks:** MITRE ATT&CK (basic working knowledge), Cyber Kill Chain.
- **Security Tools:** Nmap, Wireshark, Metasploit Framework, John the Ripper, Burp Suite basics.
- **Operating Systems:** Linux (Kali - command line, VM setup on macOS via UTM), Metasploitable 2, basic Windows command-line operations.
- **Virtualisation & Containers:** UTM/VirtualBox for lab VMs; basic hands-on with Docker containers
- **Security Concepts:** Vulnerability scanning, penetration testing methodology, SQL Injection basics, password cracking, network reconnaissance.
- **Currently Pursuing:** CompTIA Network+ (self-study), TryHackMe – Introduction to Cybersecurity path.

HANDS ON EXPERIENCE

HOME SECURITY LAB

Self-Directed

- Built a personal lab on macOS using UTM to run Kali Linux, Metasploitable 2, and Docker containers for safe, legal practice.
- Performed network scanning, service enumeration, and basic packet analysis using Nmap and Wireshark.
- Practiced exploitation of intentionally vulnerable machines using Metasploit Framework, mapping steps against MITRE ATT&CK tactics and the Cyber Kill Chain to build attacker-perspective intuition.
- Cracked sample password hashes using John the Ripper to understand password security weaknesses and defensive controls.
- Explored basic SQL Injection techniques on vulnerable test applications to understand common OWASP-style web application risks.
- Comfortable spinning up and tearing down lab environments repeatedly — treats ‘breaking things safely’ as part of the learning loop

CERTIFICATIONS & ONLINE LEARNING

- TryHackMe – Introduction to Cybersecurity (In Progress)
- CompTIA Network+ – Self-Study (In Progress)

STRENGTHS

- Genuine, self-driven interest in SOC operations and infrastructure security — tinkers with tools and labs outside of coursework
- Solid foundational understanding of networking, which underpins effective alert triage and traffic analysis
- Comfortable working in Linux environments and command-line tools; basic Windows CLI exposure
- Detail-oriented and comfortable documenting findings — keeps notes on every lab exercise and exploitation attempt
- Eager to learn SIEM tuning, hardening practices, and incident response workflows under senior mentorship

LANGUAGES

Bengali (Native) | English (Working Proficiency)
